

Weekly Report for 2015/10/19-2015/10/25

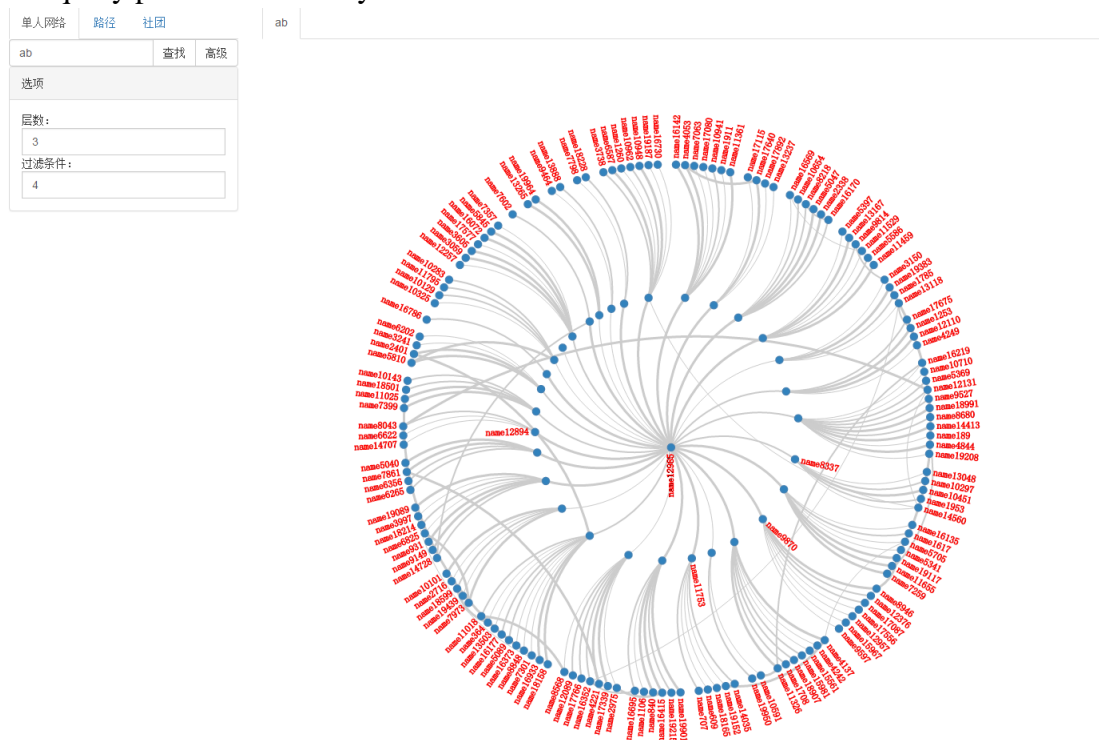

Guo Fangzhou

Progress

1. TCPTree Project

2. Large Graph Visualization

The query panel is refined by Yuxin Ma.

The link of nodes are changed to arcs. The width of the arc indicates the number of types of link between two nodes.

Several interactions are supported, including moving nodes and moving edges.

3. Vis 2016 Paper

I started to consider the topic of vis 2016 paper. Prof. Wu suggested me to use structural holes to analyze dynamic networks, therefore I find some papers about structural holes and start to read these papers.

4. CNCC

We join the CNCC in Hefei.

Plan

1. TCPTree Project

2. Large Graph

Refine the visualization of ego network and finish the interaction.

3. Vis 2016 Paper

Read papers and see how to calculate the structural holes
